Table of Contents

1 Introduction

XYZ Automation Ltd. focuses on automating various systems that have been working manually since years.

XYZ Automation Ltd. recently planned to automate "Pizza Ordering System" - a standalone/Web application [Core Java Batches - Swing Application; J2EE Batches - Web Application] intended to be used by user for ordering of pizza items.

Scope and Overview:
The scope of the Pizza Ordering System (POS) will be to provide the functionality as described below. The system will be developed on a Windows operating system using Java/J2EE.

2 Functional Requirements

The users of the 'Pizza Ordering System' are:
1. Administrator – Add/Edit/Delete/View Pizza Store and Food Item details.
2. Customer – Order Food Items and makes payment online.

Below sections 2.1 & 2.2 indicates application specific requirements; section 2.3 to 2.4 indicates requirements which are specific to particular types of users.

Please note that, against each requirement priority levels are indicated, where P1 indicates higher priority and P2 is referred as lower priority.

2.1 Authentication & Authorization

All users must be able to perform login and change password.

Requirement ID	Description	Priority
AA-001	All users (Administrator & Customer) logging into the POS application should be authenticated using a unique login-id and password (operations to be supported based on type of user)	P1
AA-002	All users should be able to change their password	P2

2.2 Exit handlers

All users must be able to successfully exit from the application.

Requirement ID	Description	Priority
EX-001	The application should handle logout (close all open database connections, invalidate sessions, etc)	P1

2.3 Administrator

Administrator must be able to perform the below mentioned functionalities.

Requirement ID	Description	Priority
AD-001	The admin should be able to add pizza store details	P1
AD-002	The admin should be able to delete pizza store details	P1
AD-003	The admin should be able to view pizza store details	P1
AD-004	The admin should be able to modify pizza store details	P1
AD-005	The admin should be able to add food item details	P1
AD-006	The admin should be able to delete food item details	P1
AD-007	The admin should be able to view food item details	P1
AD-008	The admin should be able to modify food item details	P2
AD-009	The admin should be able to change order status	P2

2.4 Customer

The customer must be able to perform the below mentioned functionalities.

Requirement ID	Description	Priority
US-001	The user should be able to register to the 'Pizza Ordering System'	P1
US-002	The user should be able to add food items to cart	P1
US-003	The user should be able to view food items from cart	P1
US-004	The user should be able to modify cart details	P1
US-005	The user should be able to confirm order by making payment	P1
US-006	The user should be able to cancel his/her order	P2

3   Interface Requirements

The Pizza Ordering System should be developed as a GUI application using Java Swings [Core Java Batches] or a Web Application using HTML/JSP screens with struts/spring framework [BC3 Batches - Spring Framework; Others - Struts Framework].

4   Non-functional Requirements

- The application should be intuitive to use and easy-to-maintain
- Designer/Programmer need to consider suitable conditions/constraints and assumptions[1]
- The application should be able to handle simultaneous requests from multiple clients
- Upon installation, the administrator is expected to have default UserID and Password
- The system may force the administrator to change his/her password to a non-default one, upon initial login
- Upon installation, the application is expected to have a default 'CreditCardDetails' table with the credit card details of users (minimum 10 entries)

Target Environment:
- Intel hardware machine (PC P4-2.26 GHz, 512 MB RAM, 40 GB HDD)
- Windows Operating System
- Server – Apache Tomcat 6 or higher
- Database – Oracle 9i or higher
- JRE 1.6 or higher
- Eclipse IDE

5   Assumptions/Dependencies/Limitations

- The scope of the application is limited to only one country.
- Information about State, Place and Locality are already stored in database.
- All food items are available across stores with sufficient quantity.
- The user can purchase food items from store of his choice and can ask for shipment to any address.

6   Acceptance Criteria

The acceptance criteria will be defined in Acceptance Test Plan.

List of expected deliverables:
- Use Cases definitions document
- Test Case documents (with test results)

---

[1] RLL Facilitator need to clarify on assumptions if required beyond indicated in section 5

- - Tested source code
- - Tested unit test code
- - File based WiproStyle report

7 Requirements Priority Table

Explains the importance of Priority

Abbreviation	Remark
P1	First Priority (Priorities have been specified along with the requirements)
P2	Second Priority (Priorities have been specified along with the requirements)

8 Acronyms and Glossary

Acronym and glossary for this document mentioned in the below table.

Abbreviation	Remark
POS	Pizza Ordering System
GUI	Graphical User Interface
